

ASSIGNMENT 4

Student Name	S.MADHUBALA
Student Roll Number	951919CS047
Team ID	PNT2022TMID13229

1. Pull an Image from docker hub and run it in docker playground.

```
docker pull uifd/ui-for-docker
```

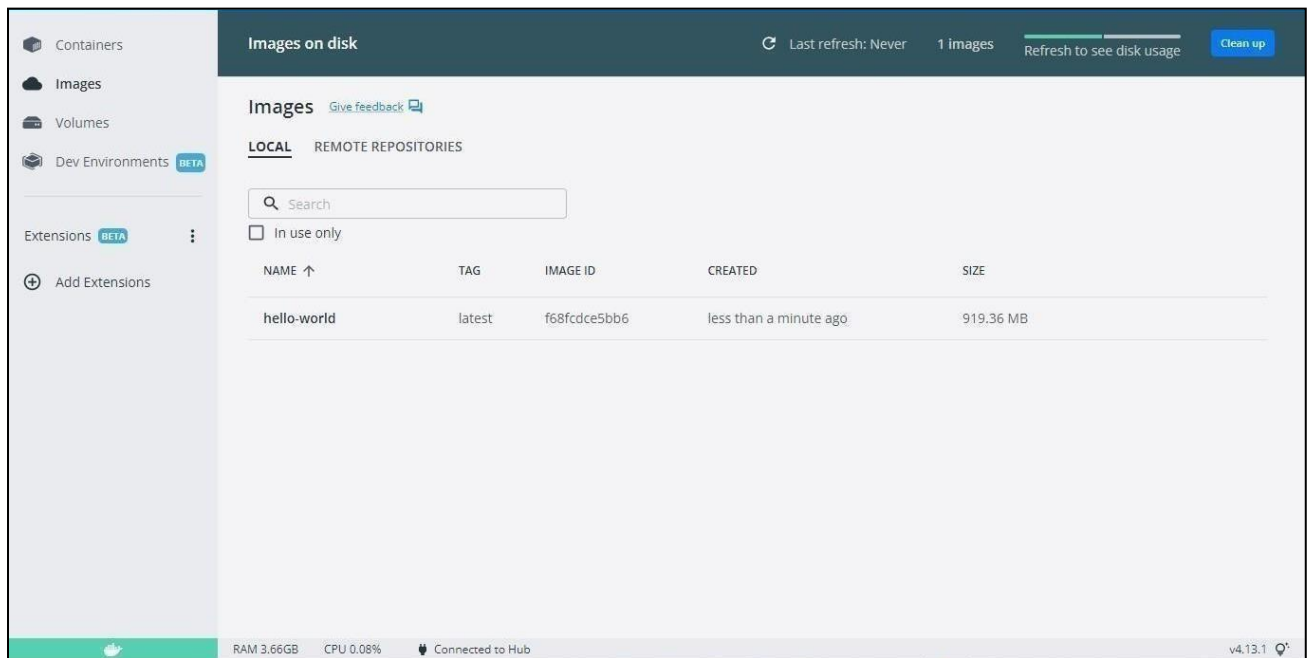

```
docker run -d -p 9000:9000 --privileged -v
```

```
/var/run/docker.sock:/var/run/docker.sock uifd/ui-for- docker
```

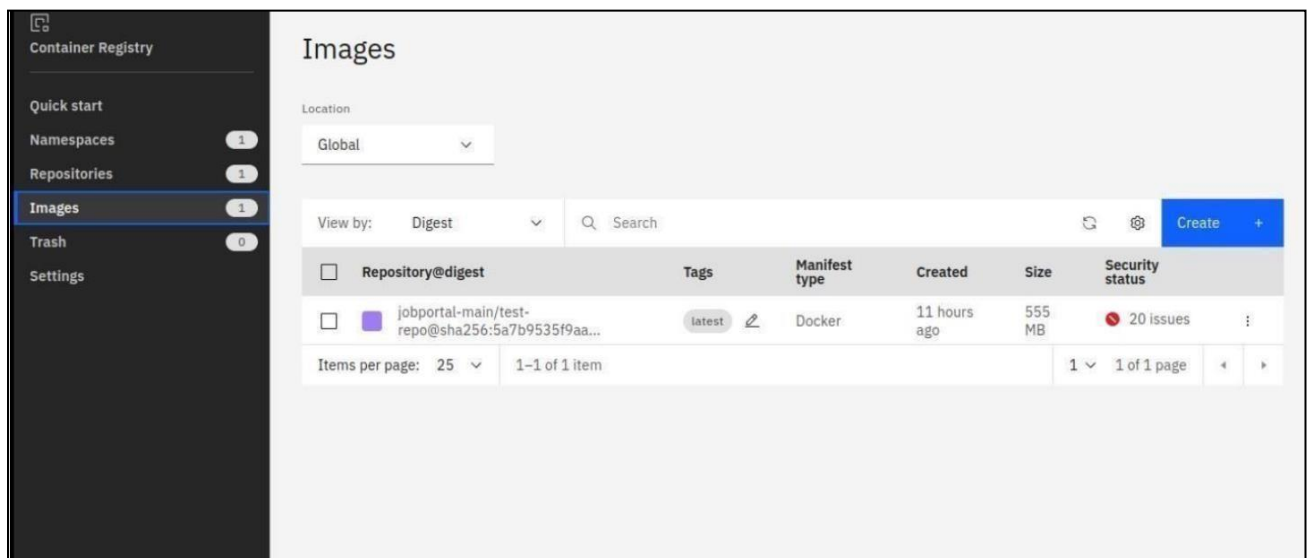

The screenshot displays the Docker Playground interface. At the top, a blue header shows the time 03:57:05 and a 'CLOSE SESSION' button. Below this, the 'Instances' section lists a single instance named 'node1' with IP 192.168.0.13. The main panel shows the details of the selected instance 'cdi0ji60_cdi0jpe0qau0008f9u8g', including its IP (192.168.0.13), memory usage (1.59%), CPU usage (0.45%), and an SSH command. Below the instance details is a terminal window showing the command 'docker pull uifd/ui-for-docker' and its output. The bottom section, titled 'UI For Docker', contains a navigation bar with tabs for Dashboard, Containers, Containers Network, Images, Networks, Volumes, and Info. The 'Containers' tab is active, showing a 'Running Containers' section with one container 'serene_keller' and a 'Status' section with a green donut chart indicating the container is 'Running'. The 'Containers created' and 'Images created' sections show a count of 1 for each.

2. Create a docker file for the jobportal application and deploy it in Docker desktop application.

```
FROM helloworld:latest
WORKDIR ~/Desktop/
ADD . helloworld/
WORKDIR ~/Desktop/htmlfile
RUN pip install -r requirements
RUN chmod +x app.sh
CMD
```

3. Create a IBM container registry and deploy helloworld app or jobportalapp.

4. Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in nodeport.
